T.P.L.O. and Multi-Purpose Plates

Tibial Plateau Leveling Osteotomy Plates

With over 100 styles and sizes to choose from, finding the right plate can be a little overwhelming. Our item codes include the size and style of the plate, along with the plate features and the material if anything other than the standard implant grade stainless steel. We have come up with abbreviations so the codes are understandable. Here is a key for you.

T.P.L.O. CODE KEY

B = B Style, universal + = Size larger than 3.5, but smaller than 3.5 Broad
L = L Style, locking B = Broad
M = M Style, multipurpose D = Compression Hole
O = O Style, licensed by Slocum K = Locking Holes (non-locking screws can be used)
P = Pearl P = Pre-bent
T = T Style, triangular LC = Low Contact
TWO = TWO Style, tibial wedge osteotomy
U = U Style, universal
Y = Y Style, multipurpose

T.P.L.O. Weight Recommendations

Materials Information For Our T.P.L.O. Plates

VOI has always machined plates from solid bars of implant grade stainless steel. We have never used a "cast", "stamped" or injection molding methods to mass-produce our plates.

Each year we purchase thousands of pounds of material in various shapes and diameters. The material is made to ASTM standards. VOI, Biomet, AESCULAP and most other manufacturers choose to purchase this material from a select few mills based in Germany.

ASTM F 138 (round shape for screws)
ASTM F 139 (rectangular shape for plates)

The material is “cold drawn”; this hardening process produces greater tensile strength.

Tensile strength: Measures the force required to pull something such as wire or a structural beam to the point where it breaks. Specifically, the tensile strength of a material is the maximum amount of tensile stress that the material can be subjected to before failure.

Strength:

\[
\text{PSI} = \frac{\text{Pounds}}{\text{square inch}} \quad \text{PSI} = 0.006895 \frac{\text{N}}{\text{mm}^2} \\
\text{PSI} = 0.001 \text{ KSI} \quad \text{KSI} = 6.895 \frac{\text{N}}{\text{mm}^2} \\
\text{KSI} = 6.895 \text{ megapascal} \quad \text{KSI} = 0.704 \text{ Kiloagram/square millimeter} \\
\text{PSI} = 0.006895 \text{ megapascal} \quad \text{KSI} = 1000 \text{ PSI} = \text{Newton/square millimeter (n/mm2)} \\
\text{N/mm2} = \text{megapascal}
\]

From day one, all of our TPLO plates have been manufactured with this standard material (1,100 N/mm2).

We now offer plates that are easier to contour. The material remains ASTM F 139 Implant Grade Stainless Steel; the only variation is we requested the material not be hardened to the same level.

The plates we now refer to as being “soft” are approximately 500 N/mm2. Several surgeons have used them and they tell us they are similar in hardness to the Slocum plates.

For identification purposes; the “soft” plates are laser-marked as so on their side; this is the only way to identify them. They are now available at no additional cost.

Feel free to e-mail specific technical questions to sales@vetimplants.com.
